Muscle Strength/Function: ROM Eval

MANUAL MUSCLE TEST (MMT) MUSCLE STRENGTH

GRADE	DESCRIPTION
5	Normal functional strength - against gravity - full resistance
4	Good strength - against gravity with some resistance
3	Fair strength - against gravity - no resistance - safety compromise
2	Poor strength - unable to move against gravity
1	Trace strength - slight muscle contraction - no motion
0	Zero - no active muscle contraction

FUNCTIONAL RANGE OF MOTION (ROM) SCALE

GRADE	DESCRIPTION
5	100% active functional motion
4	75% active functional motion
3	50% active functional motion
2	25% active functional motion
1	Less than 25%

Assessment Summary

Communication regarding goals and progression was discussed with the pt during this re-evaluation summary that included assessing functional mobility. Pt has progressed toward supervision/indep with all functional mobility to include bed mobility and transfers. Pt is displaying compliance with HEP and good carryover with technique. Pt able to ambulate an increased distance of 200ft using 2WW and supervision requiring verbal cues to maintain slow cadence. Pt anticipatory postural control was challenged with pt demonstrating a grade of Fair. Pt BLE strength and dynamic walking was also assessed via the TUG with a performance time of 19 sec indicating that pt is at an increased risk for falls. Pt able to maintain a standing tolerance of 10 min with BUE support. Pt will benefit from continued PT services to continue advancing pt's progressions with established POC.

Goals / Interventions

Physical Therapy

Interventions

Evaluation and Treatment

Establish Home Exercise Program and Activity Program

Home safety evaluation and fall prevention/teach fall risk reduction strategies

Therapeutic Exercises: Balance, coordination, and/or agility training

Therapeutic Exercises: Body Mechanics, postural training and positioning

Therapeutic Exercises: Strength training

Gait Training: Asst device

Transfer Training: Sit <-> Stand

Teach precautions/restrictions; Spinal precautions

Aerobic Capacity

Goals

LTG-Patient will tolerate 25-30 minutes of continuous upright activity without increased pain or undue fatigue.

Balance

Goals

LTG-Patient to demonstrate improved functional balance as noted with TUG score <= 15 seconds using LRD

Mobility/Gait

Goals

LTG-Patient will ambulate 300+ feet with RW and CGA or better, maintaining spinal precautions and wearing CTO brace.

LTG-Patient will perform independent bed mobility and transfers using log roll technique and correct body mechanics.

STG-Patient will demonstrate understanding of spinal precautions during all therapeutic activities with <1 verbal cue.
