Assessment Summary

Pt is a 69 yo male who presents to home health PT evaluation. His PMH includes resection of the proximal ileum secondary to a recent diagnosis of colorectal cancer. He reports having great discomfort in a seated position, which impacted his ability to sit and complete some of his tests (TUG and 30" sit to stand). The patient recently underwent a procedure for the placement of a port on his left chest to start chemotherapy on 02/12/26. He reports having soreness when moving his left arm. The patient will have chemotherapy every two weeks. He presents with reduced gross & functional LE strength, impaired gait, and reduced endurance that impacts his ability to complete his ADL independently. The patient stated he has lost ~40 lbs since his cancer diagnosis. His main goal is to regain his strength and get back to doing activities with his family. He is homebound and presents as a fall risk. He would benefit from skilled physical therapy services to address the deficits identified in this evaluation.

Goals / Interventions

Physical Therapy

Interventions

Establish Home Exercise Program and Activity Program

Home safety evaluation and fall prevention/reach fall risk reduction strategies

Therapeutic Exercises: Balance, coordination, and/or agility training

Therapeutic Exercises: Strength training

Gait Training: even and uneven surfaces

Aerobic Capacity

Goals

STG-The pt will demonstrate improved activity tolerance as evidenced by increased ability to utilize pacing and/or energy conservation without instruction while performing ADL with O2 sat > 90% within 4 weeks.

Balance

Goals

STG-The patient will demonstrate improved functional balance as evidenced by increased Tinetti - POMA score from 20/28 to 24/28 in order to improve ADL within 4 weeks.

HEP

Goals

LTG-Patient and/or caregiver will complete Home Exercise Program with no assistance within 8 weeks, or at the end of the episode.

Mobility/Gait

Goals

STG-Patient will demonstrate improved mobility as evidenced by the increased ability to ambulate without AD and supervision for >250 ft in order to safely leave his home and attend medical appointments.

Patient Stated Goals

Goals

LTG-"*Patient stated LTG **** "I would like to regain some strength and endurance."
