Pt appears more steady using cane than without AD.

Therapist adjusted cane to appropriate setting for pt's height, pt appears comfortable at new level
Therapist advised patient to use cane PRN to deal fall risk; pt verbalizes understanding.

Assessment Summary

81 year old female, with hx of L arm pain (from fall in October 2025), HTN, Glaucoma, HLD, and GERD; presents with impaired LUE mobility, balance deficits, decreased endurance, and muscle weakness. Pt requires skilled PT intervention to address deficits, and improve overall functional mobility thereby improving quality of life. PT plan of care to focus on Pt ex., transfer/gait activities, bed mobility activities, use of heat/cold modalities, endurance and balance training (all listed interventions PRN), in order to improve LUE mobility and increase independence with transfers and ambulation. Pt verbalizes good understanding and agrees with PT plan of care.

Goals / Interventions

Physical Therapy

Interventions

Ther ex, Transfer training, Gait training, Bed mobility training, Balance activities, Endurance training, AD management, Heat/Cold modalities, Manual therapy, HO/caregiver education, Monitor vitals/Fall risk, all listed interventions PRN

PT/A to instruct the patient/caregiver to contact agency to report any fall with or without minor injury. Call 911 for fall resulting in serious injury or causing severe pain or immobility

PT/A to instruct patient to change positions slowly

PT/A to instruct the Patient/caregiver to remove clutter from patient's care such as clothes, books, shoes, electrical cords, or other items that may cause patient to trip

Mobility

Goals

Pt will exhibit L shoulder flexion > 120deg, in order to improve ADL performance and improve LUE mobility, in 3 weeks

Mobility/Gait

Goals

Pt will ambulate >150' (total distance) over level surfaces of mod I level, or with SUP, using LRD (PRN), in order to safely access different areas
