Muscle Strength/Function ROM Eval

MANUAL MUSCLE TEST (MMT) MUSCLE STRENGTH

GRADE	DESCRIPTION
5	Normal functional strength - against gravity - full resistance
4	Good strength - against gravity with some resistance
3	Fair strength - against gravity - no resistance - safety compromise
2	Poor strength - unable to move against gravity
1	Trace strength - slight muscle contraction - no motion
0	Zero - no active muscle contraction

FUNCTIONAL RANGE OF MOTION (ROM) SCALE

GRADE	DESCRIPTION
5	100% active functional motion
4	75% active functional motion
3	50% active functional motion
2	25% active functional motion
1	Less than 25%

QUALITY/DEVIATIONS/POSTURES: shuffling gait pattern with decreased foot clearance bilat - heavy use of bilat UE on walker, leading to incr. sh pain.

Assessment Summary

Patient is a 69 year old female with recent diagnosis of ALS. She us utilizing manual wheelchair for primary means of mobility, but has just received a powerwheelchair. Her husband plans on making modifications to the home so she can access all areas independently. She requires SBA for STS transfer from elevated recliner to 2WW. Patient is ambulatory short distances but fatigues easily. Patient is a high fall risk with a Tinetti-POMA score of 12/28. Recommend skilled PT for gentle mobility, stretching, transfer training and light strengthening to maintain independence for as long as possible. Patient was educated in HEP, POC and was involved in the development of these therapeutic goals.

Pt stated goals are to maintain mobility.

Goals / Interventions

Physical Therapy

Interventions

Establish Home Exercise Program and Activity Program

Therapeutic Exercises: PROM/AAROM/AROM

Therapeutic Exercises: Balance, coordination, and/or agility training

Therapeutic Exercises: Neuromotor training/neuromuscular re-education

Therapeutic Exercises: Strength training

Transfer Training : Supine <>Sit, Sit <> Stand, Bed <> Chair, On/Off toilet or commode, In/Out shower or tub , Floor , car

Balance

Goals

LTG-The patient will demonstrate improved functional balance as evidenced by increased Tinetti - POMA score from 12/28 to >16/28 in order to improve safety with transfers/decrease fall risk within 6 weeks. or at end of episode.

Mobility

Goals

LTG-Patient will demonstrate improved functional capacity as evidenced by the increased ability to operate motorized WC from SBA to Mod I in order to maximize the ability to perform mobility related ADLs within 6 weeks. or at end of episode.

Patient Stated Goals

Goals

LTG-Pts stated goals are to maintain ROM and mobility - by end of episode

Transfer Training

Goals

STG-The patient will improve/maintain STS transfer from SBA/Sup to SUP using 2WW in order to be able to safely stand from home furniture within 4 weeks.

Hospitalization Risk Factors

Goals

Patient and/or caregivers will verbalize understanding of ways to mitigate risk of return to the hospital and unplanned ER use.
