Pathogens Detected

Detected Pathogens	Recommended Antibiotics
Bacteroides fragilis	*Ampicillin / Sulbactam, Imipenem/Cilastatin, Metronidazole, Piperacillin / Tazobactam*
Klebsiella pneumoniae	*Trimethoprim/sulfamethoxazole, Ciprofloxacin, Levofloxacin, Tigecycline*
Pseudomonas aeruginosa	*Trimethoprim/sulfamethoxazole, Ciprofloxacin, Levofloxacin, Imipenem/Cilastatin*
Staphylococcus aureus	*Daptomycin, Linezolid, Trimethoprim/sulfamethoxazole*
Streptococcus agalactiae	*Clindamycin, Vancomycin*

Antibiotic Resistance Markers Detected

Detected Resistance Markers	Comment
mecA	

Pathogens Not Detected

Acinetobacter baumannii - Aspergillus niger - Candida albicans - Candida dubliniensis - Candida glabrata - Candida krusei - Candida tropicalis - Citrobacter freundii - Clostridium novy - Clostridium septicum - Enterobacter aerogenes - Enterobacter cloacae - Enterococcus faecalis - Enterococcus faecium - Escherichia coli - Kingella kingae - Klebsiella oxytoca - Morganella morganii - Proteus mirabilis - Proteus vulgaris - Streptococcus pyogenes

Antibiotic Resistance Markers Not Detected

VIM-CarbB - blaOXA-48 - IMP-1-CarbB - KPC-CarbA - blaACT - mefA - BlaNDM-1 - qnrA - qnrS - vanA - vanB - mecC

Antibiotics	Recommended Treatment Dosage
Ampicillin / Sulbactam	IV: 1.5 to 3 g every 6 hours. Duration: 5-14 days.
Imipenem/Cilastatin	IV: 0.5-1 g every 6 to 8 hours. Duration: 5-14 days.
Metronidazole	IV: 500 mg every 6-8 hours in combination with other appropriate agents.
Piperacillin / Tazobactam	IV: 3.375 g every 6 to 8 hours. Duration: 5-14 days.
Trimethoprim/sulfamethoxazole	Oral: 1 to 2 double-strength tablets twice daily. Duration: 5-14 days.
Ciprofloxacin	Oral: Immediate release: 500 to 750 mg twice daily; IV: 400 mg every 12 hours; Duration: 5-14 days.
Levofloxacin	Oral, IV: 750 mg once daily. Duration: 5-14 days.
Tigecycline	IV: Initial: 100 mg as a single dose; Maintenance dose: 50 mg every 12 hours. Duration: 5-14 days.
Daptomycin	IV: 4 to 6 mg/kg once daily. Duration: 5-14 days.
Linezolid	Oral, IV: 600 mg every 12 hours. Duration: 5-14 days.
Clindamycin	Oral: 150-300 mg 4 times daily; IV: 600 to 900 mg every 8 hours; Duration: 5-14 days.
Vancomycin	IV: 15 mg/kg/dose every 12 hours initially.

Methodology:
This Wound Panel molecular multiple pathogen detection test is a laboratory-developed test (LDT). It employs real-time PCR to specifically detect pathogens, as listed above, in the patient's wound specimen. The patient's wound specimen is processed to extract RNA/DNA, and specific primers are used on a real-time PCR instrument to detect the presence of the various pathogens listed on the panel (as mentioned above). The test results are then compared to contrived positive controls, internal controls, and Negative Template Controls (Quality Control Samples) that are run alongside the patient's extracted wound sample for the molecular diagnosis of infections.

Limitations:
All molecular tests have limitations. If a patient receives a 'NOT DETECTED' or 'NEGATIVE' result, it means that the pathogens mentioned in the report were not detected in the specimen at the time of sample collection. However, it's important to note that this result does not rule out the possibility that the patient's symptoms, experienced prior to this test, may be caused by pathogens not included in this panel.

Laboratory Statement:
This test has been validated, and its performance characteristics have been determined by Raazi Clinical Laboratory, located at 7171 Hwy 6 N, Suite 112, Houston, TX 77095, CLIA#45D2195933, Laboratory Director Dr. Mehran Haidari PhD. It is important to note that this test is intended for clinical purposes, as outlined in the eligibility criteria. Its use should not be considered investigational or for research purposes, and it only tests for the pathogens listed in the report. We strongly recommend undergoing this test when the patient experiences symptoms consistent with infectious disease etiology with the clinician's advice and prescription. This laboratory is certified under Clinical Laboratory Improvements and Amendments of 1988 (CLIA 88) as qualified to perform high complexity clinical laboratory testing. This test has not been cleared or approved by the FDA. The FDA has determined that such approval is not necessary, provided that the laboratory both (1) maintains its good standing as a clinical testing laboratory with all mandatory accrediting bodies, and (2) continually demonstrates that its testing protocols and procedures achieve a high degree of analytical accuracy. Medication Recommendations/pharmacy guidance are given for informational purposes only. The final prescription will be determined by the physician based on the patient's clinical history and correlation. Raazi Clinical Laboratory is not responsible for adverse drug reactions if the patient takes medications based on the guidelines provided without physician's prescription. Final medications are under the physician's discretion.

Eligibility for Testing: This test should be used for diagnostic use only and is limited to patients suspected of wound infections by their healthcare provider. The eligibility determination ultimately rests on the clinician's judgment.

Conduct of the Test: This test is performed under strict compliance and guidelines of Raazi Clinical Laboratory R&D team, including the instruments, reagents, and other recommended procedures. This includes the safety protocols where all laboratory personnel are appropriately trained in qPCR techniques and use appropriate laboratory and personal protective equipment when handling this kit/test and use this test in accordance with the authorized labeling.

Result Reports for Healthcare Providers and Patients: We have a process for reporting test results to healthcare providers as appropriate. Result reports will be provided to healthcare providers and patients.

Performance Data and Reporting: We collect information on the performance of the test and report any suspected occurrence of false positive or false negative results and significant deviations from the established performance characteristics of the test of which we become aware to concerned authorities.

Recordkeeping: As an authorized laboratory we ensure all records associated with this test are maintained until otherwise notified. Such records are available to regulatory bodies for inspection upon request at any time.
